1	Part 1 - Build your CMDB	2
2	Part 2 - Incident Management	4
3	Part 3 - Category Management	5
4	Part 4 - Problem Management	5
5	Part 5 - Change Management	6
6	Final Deliverable	6

Objective

The objective of this exercise is to simulate how an IT team operates using ITIL best practices in GLPI.

1 Part 1 - Build your CMDB

Step 1: Create CI:

Go to Assets → Computers → + Add. Create:

- WEB-SRV-Team02 (Web Server)
- APP-SRV-Team02 (Application Server)
- DB-SRV-Team02 (Database Server)
- ERP-SRV-Team02 (ERP Server)

Create Screenshots:

Name: WEB-SRV-Team02

Location: EPITA Team02 > Data Center

Technician in charge: Jain Arhanth

Group in charge: Team02

Alternate username number:

Alternate username:

User: Su Huizhe

Group: Team02

Comments: This server is for web services.

Status: Status Team02 > In production

Type: Server

Manufacturer: Dell

Model: PowerEdge R740

Serial number: WEB-SRV-SN002

Inventory number: INV-SERV-02

Network: 10.41.176.0/24

UUID: 11cb06e5-6534-4e3e-b737-94613486de28

Update Source: Fusion Inventory

Asset URL: 

Put in trashbin Save

Name: APP-SRV-Team02

Location: EPITA Team02 > Data Center

Technician in charge: Su Huizhe

Group in charge: Team02

Alternate username number:

Alternate username:

User: Jain Arhanth

Group: Team02

Comments: This server is for hosting the application.

Status: Status Team02 > In production

Type: Server

Manufacturer: Dell

Model: PowerEdge R740

Serial number: APP-SRV-SN002

Inventory number: INV-SERV-01

Network: 10.41.176.0/24

UUID: bd07635b-fe18-4d8e-aeed-96b4d21b102

Update Source: Fusion Inventory

Add

New item - Computer Root entity > ITILSE_26 Child entities

Name	DB-SRV-Team02	Status	Status Team02 > In production
Location	EPITA Team02 > Data Center	Type	Server
Technician in charge	Doorga Trithikraj	Manufacturer	Dell
Group in charge	Team02	Model	PowerEdge R740 -
Alternate username number		Serial number	DB-SRV02-SN001
Alternate username		Inventory number	INV-DB-02
User	Jain Arihant	Network	10.41.176.0/24
Group	Team02	UUID	5f73280d-2b6e-4ef9-bc8d-771cafe47185
Comments	Primary production database server for Team02.		
		Update Source	Fusion Inventory

+ Add

New item - Computer Root entity > ITILSE_26 Child entities

Name	ERP-SRV-Team02	Status	Status Team02 > In production
Location	EPITA Team02 > Data Center	Type	Server
Technician in charge	Aiyeniko Ayooluwatomi	Manufacturer	HP
Group in charge	Team02	Model	ProLiant DL380 -
Alternate username number		Serial number	ERP-SRV02-SN001
Alternate username		Inventory number	INV-ERP-02
User	Doorga Trithikraj	Network	10.41.176.0/24
Group	Team02	UUID	85251052-eb5b-4bb8-a2d9-c20c5968908
Comments	ERP application server for Team02. Hosts ERP modules and business logic.		
		Update Source	Fusion Inventory

+ Add

Step 2: Fill in CI information:

- Name
- Status: In production
- Type: Server
- Location: Data Center
- Comments

Step 3: Define relationships:

- WEB-SRV-Team02 **depends on** APP-SRV-Team02
- APP-SRV-Team02 **depends on** DB-SRV-Team02

Relationships are defined in GLPI by editing a CI, navigating to the **Links** or **Relationships** tab, and linking to the relevant CI with the appropriate relationship type (e.g., "Depends on").

Impact Analysis - CI Relationships:

Impact			
Item	Relation	Tickets	Problems
COMPUTERS (2)			
APP-SRV-Team02	WEB-SRV-Team02 > APP-SRV-Team02		
DB-SRV-Team02	WEB-SRV-Team02 > APP-SRV-Team02 > DB-SRV-Team02		

2 Part 2 - Incident Management

Step 4: Create tickets (Assistance → Tickets → + Add)

Create Ticket Screenshot:

The screenshot displays the ticket creation process. On the left, a modal form titled 'Su Huizhe' contains the following fields:

- Title:** Team02-INC-3005
- Description:** JVM heap usage continuously increases until service restart is required.
- File(s) (2 Mio max):** A section for uploading files with a 'Browse...' button and 'No files selected' status.

On the right, a sidebar contains various configuration options:

- Urgency:** Medium
- Impact:** Medium
- Priority:** Major
- Location:** EPITA Team02 > Data Center
- Total duration:** -----
- External ID:** (empty field)
- Actors:** 0
- Requester:** Su Huizhe (2)
- Observer:** (empty field)
- Assigned to:** Su Huizhe (0)
- Items:** 1
 - My devices: -----
 - Or complete search: General
 - + Add
 - Computer : APP-SRV-Team02 - i
- Service levels:** (empty field)
- Linked assistance objects:** (empty field)

A red box highlights the 'Items' section, specifically the '+ Add' button and the 'Computer : APP-SRV-Team02 - i' entry.

Step 5: Link tickets to CI (MANDATORY)

Step 6: Manage tickets:

- Assign
- Update

- Comment
- Prioritize

Tickets List Screenshot:

Ticket										
ID	TITLE	STATUS	LAST UPDATE	OPENING DATE	PRIORITY	ASSIGNED TO - TECHNICIAN	REQUESTER - REQUESTER	CATEGORY	TIME TO RESOLVE	DESCRIPTION
207	Team02 - Database Connectivity and Transaction Latency Issues Identified on DB-SRV02-SN001	Processing (assigned)	2026-05-07 12:20	2026-05-07 12:18	Medium	Doorga Trithikraj	Aiyeniko Ayooluwatomi	Team02 > Database / Replication		Automated monitoring alerts have identified abnormal database response times and intermittent connectivity failures on DB-SRV02-SN001. Multiple dependent applications are reporting delayed transactions, query timeouts, and occasional failures when at (...)
208	Team02 - Scheduled reports delayed	Processing (assigned)	2026-05-07 12:19	2026-05-07 12:18	Low	Aiyeniko Ayooluwatomi	Su Huizhe	Team02 > ERP / Scheduling		Automated daily ERP reports generated 2 hours later than configured schedule.
206	Team02 - PostgreSQL replication lag	Processing (assigned)	2026-05-07 12:18	2026-05-07 12:17	Very high	Doorga Trithikraj	Su Huizhe	Team02 > Database / Replication		Standby database replica delayed by more than 15 minutes.
205	Team02-INC-3005	Processing (assigned)	2026-05-07 12:15	2026-05-07 12:14	Very high	Su Huizhe	Su Huizhe	Team02 > Application Runtime / Memory		JVM heap usage continuously increases until service restart is required.
197	Team02-WEB-1001	Processing (assigned)	2026-05-07 12:09	2026-05-07 12:09	High	Jain Arihant	Su Huizhe	Team02 > Backend API		Users report random 502 Bad Gateway responses when submitting checkout requests. Issue appears during peak traffic.

3 Part 3 - Category Management

Step 7: Create ticket category (Administration → Ticket categories → + Add)

Create Category Screenshot:

New item - ITIL category

Root entity > ITILSE_26

Child entities

Name

Backend API

Comments

Visible for an incident

Visible for a request

4 Part 4 - Problem Management

Step 8: Create a problem (Assistance → Problems → + Add)

Step 9: Link incidents to the problem

Problem Screenshot:

9	Recurring Performance Degradation and Service Instability on ERP-SRV02-SN001 Impacting Enterprise Operations	Root entity ITILSE_26	A recurring issue has been identified on server ERP-SRV02-SN001 causing intermittent ERP platform instability, degraded system responsiveness, and disruption to core business operations. Multiple incidents have been opened over recent periods report! (...)	Processing (assigned)	2026-05-07 12:24	2026-05-07 12:24	High	Team02 > ERP / Scheduling
---	--	--------------------------	--	------------------------------------	------------------	------------------	------	---------------------------

5 Part 5 - Change Management

Step 10: Create a change request (Assistance → Changes → + Add)

Create Change Request Screenshot:

HS

Created: Just now by Su HuiZhe

Team02 - Change Request (ERP)

This change request proposes upgrading the ERP middleware and integration layer (SAP connector service) from version 4.12.3 to 4.13.0. The current version is experiencing intermittent message queuing delays and occasional blocking in the integration pipeline, affecting downstream financial and inventory synchronization.

The upgrade includes:

- Patch for SAP message queue deadlock issue
- Improved retry mechanism for failed transactions
- Performance optimization for bulk invoice processing
- Updated dependency libraries for security compliance

The change will be applied during a planned maintenance window to minimize business disruption.

Opening date: 2026-05-07 12:26:15

Time to resolve:

Category: Team02 > ERP / Scheduling

Status: New

Urgency: High

Impact: High

Priority: High

Location: EPITA Team02 > Data Center

Screenshots

- CI List - Impact Analysis:

- CI Relationships - Impact Analysis:

Item	Relation	Tickets	Problems	Changes
APP-SRV-Team02	APP-SRV-Team02 (1) > DB-SRV-Team02 (2)	1		
WEB-SRV-Team02	WEB-SRV-Team02 (1) > APP-SRV-Team02 (1) > DB-SRV-Team02 (2)	1		

Mini Dashboard

- Number of incidents: **5** (IDs: 197, 205, 206, 207, 208)
- Critical incidents: **2**
 - ID 205 – JVM heap memory leak (Very High)
 - ID 206 – PostgreSQL replication lag (Very High)
- Impacted CI: **WEB-SRV-Team02, APP-SRV-Team02, DB-SRV-Team02, ERP-SRV-Team02**
- Root cause: **Database layer degradation on DB-SRV-Team02** (connectivity issues + replication lag). This triggered cascading failures across APP, WEB, and ERP services.

Short Analysis

- What happened? Database failed. All systems went down.
- Root cause? Database had memory leak and replication problems.
- Lessons learned? Database is critical. Monitor it closely.
- Improvements? Add database monitoring and alerts.
